Ice stats with Barry

While he's been busy scraping and pebbling, Barry Brown has also been keeping track of the numbers and they are quite amazing.

Barry says it took 6,000 gallons and 23 floods to install the ice in the fall. Since then the icemakers have done about 340 scrapes after games. It takes five gallons of water to pebble all the sheets so they've applied about 1,700 gallons of water to keep our rocks sliding. Barry notes that it takes about an hour and a half to scrape, pebble and nip the ice to prepare it.
